Symetrics Awarded NAVAIR AN/USQ-131/B Memory Loader Verifier Set Contract

Melbourne, Florida, November 1, 2006 – Symetrics Industries, LLC was recently awarded a contract from the US Navy's Naval Inventory Control Point (NAVICP) for over 100 AN/USQ-131/B Memory Loader Verifier Sets (MLVS). The contract value was approximately \$1.5M and was significant for Symetrics, as this marked the 8th straight year of continuous production on this unit.

Symetrics received an additional order for a number of MLVS units from another local Melbourne business, that totaled over half a million dollars. Given the success of these two awards, and Symetrics' recognition as the proven source for the USQ-131/B, they expect an additional order for an unspecified number of MLVS units from NAVICP, and at least one other DoD contractor prior to the end of the year. Mitch Garner, President and CEO of Symetrics put it this way: "It is an honor to be awarded these multiple contracts, as it is a testimony to the Symetrics employees who work extremely hard to ensure that only the highest quality products are consistently delivered to our customers."

The AN/USQ-131/B Memory Loader-Verifier Set (MLVS) is a small portable unit that is capable of loading and verifying Operational Flight Programs (OFPs), Mission Data Files (MDFs) and User Data Files (UDFs) into aircraft's EW systems and self-protection suites. It is used to load the AN/ALE-47 Countermeasures Dispenser System --- a Symetrics-built system that protects aircraft from surface-to-air and air-to-air missiles. Both the MLVS and ALE-47 are utilized on aircraft throughout the world.

Symetrics Industries, LLC, which is ISO-9001-2000 registered, designs, manufactures, tests and delivers electronic assemblies and sophisticated systems of the highest quality for the U.S. Department of Defense and International commercial and military customers. For 44 years, the term "Symetrics-built" ensures the customer high quality, low cost and responsiveness – worldwide.
