# PRESS RELEASE

## Symetrics Industries, LLC awarded follow-on contract with U.S. Navy

MELBOURNE, FLORIDA, April 23, 2009 ---- Symetrics Industries, LLC announced today that it has received a follow-on contract award from the U.S. Navy for Technique Control Modulator (TCM) chassis assemblies. The TCM is a 7-slot VME-3U chassis with power and signal conditioning that allows various configurations of commercial and custom VME-3U circuit cards to be installed. The TCM is then able to perform multiple RF Electronic Warfare simulations. The contract was issued by the Naval Air Warfare Center, Weapons Division in China Lake, California, and has a 5-year period of performance. Symetrics previously won a similar 5-year contract in 2002 for the production of these same assemblies.

"We are always pleased when we win a follow-on contract", said Mitch Garner, Symetrics' President & CEO. "This award demonstrates Symetrics' ability to execute a long-term program, and keep a government customer satisfied".

Under this new contract, Symetrics may potentially manufacture, test, and deliver up to 500 chassis and 950 kits of spare parts, provide the government with repair services, as well as engineering support and technical tasks. All contractual efforts will be performed at the Symetrics facility located in Melbourne, FL.

### **About Symetrics Industries, LLC**

Symetrics Industries, an AS9100 and ISO9001-2000 registered small business, specializes in electronics design, manufacture and test for Department of Defense, U.S. State Department, and major prime contractors. The company continually expands its engineering capabilities by addressing customers' needs in design and integration of products into specific airborne/ground platforms. Symetrics has three main business sectors: electronic warfare, digital communications, and electronic manufacturing services. Symetrics' sister company, PhotoTelesis, specializes in imagery solutions and solid-state digital-video-recorders. Symetrics' product line includes: AN/ALE-47 countermeasures dispenser system; AN/ALM-295 countermeasures dispenser tester; improved data modems (IDM-302/IDM-304/IDM-501/Mini-IDM/U-ROC); PRISM (photo reconnaissance intelligence strike module); AN/USQ-131B memory loader-verifier system, digital-video recorders, and the LVRS (lightweight video-reconnaissance system).
