PRESS RELEASE

Symetrics Industries Awarded \$3.5 M Order for AN/ALE -47 Countermeasures Dispenser System

MELBOURNE, FLORIDA, May 20, 2009 — Symetrics Industries, LLC today announced it has received a \$3.5M order for the AN/ALE-47 Countermeasures Dispenser System (CMDS) from the U.S. Air Force. This marks the twentieth delivery order placed against a five-year contract Symetrics won in November of 2006. In the twenty-eight months since then, over 9,200 assemblies have been delivered on, or ahead of the contract schedule, with a total value of nearly \$28M.

Ann Gill, Director of EW Programs, points to an excellent eight year relationship with the USAF. She states, "at the Program Review held in February, the Warner Robins team told us they consider the Symetrics name to be synonymous with quality and outstanding on-time delivery. This order reinforces the confidence the government has in our ability to consistently exceed expectations by providing excellent service, in addition to delivering the highest quality product on-time and often early."

The AN/ALE-47 CMDS is an Electronic Warfare self-protection suite that provides combat aircrews with enhanced survivability against surface-to-air and air-to-air missile threats in all environments, by dispensing chaff or flares. It can be integrated on virtually any aircraft type. The system has been dubbed the "Guardian Angel" by those in the military that use it.

Symetrics has delivered thousands of components to the Department of Defense, the US State Department, and numerous domestic and international commercial customers as the U.S. Government's prime supplier of the system since 2001. Symetrics also manufactures support equipment for the system, including the [AN/ALM-295](#) Countermeasures Dispenser Test Set, and the [AN/USQ-131B](#) Memory Loader Verifier Set (MLVS), utilized for loading mission data software.

Symetrics Industries, LLC is an AS9100 and ISO-9001-2000 registered company and has been designing, manufacturing, testing and delivering low cost electronic assemblies and sophisticated EW and Communication systems of the highest quality to the DoD for over 45 years.
