

Symetrics Awarded Additional Delivery Orders on \$67m Contract for AN/ALE-47 Countermeasures Dispenser System

MELBOURNE, Fla., May 22 /PRNewswire/ -- [Symetrics Industries LLC](#) announced today that it was awarded three additional delivery orders totaling \$2.6M on its full rate production contract of the AN/ALE-47 Countermeasures Dispenser System (CMDS) for the U.S. Department of Defense. The contracting agency for the program is [Warner Robins](#) Air Logistics Center (WR-ALC) at Robins Air Force Base, Georgia. These latest delivery orders, placed on the Indefinite Delivery Indefinite Quantity (IDIQ) contract awarded in Nov. 2006 for \$67M, is on the heels of a \$6.6M delivery order placed a few months ago. This marks an unprecedented achievement in the history of the USG's ALE-47 contract with a supplier, as the government is now close to an approximated \$10M in awards during the first 6 months of the multi-year contract. In addition, the USG opted to exercise contract line items in both the first and second Option periods of the contract, increasing the potential total award by almost \$40M.

[Mitch Garner](#), President and CEO, was elated but not surprised at the award. As he stated, "We have been told numerous times by our government customer that we are a highly responsive and dedicated supplier, who continually delivers early with an outstanding quality product. This award merely fortifies those acclamations, by putting actions behind the words. We will continue to be the best supplier that WR-ALC has ever seen, as we endeavor to uphold the reputation that won us this contract in the first place." Symetrics backs up those words by continually pushing the program team to give their utmost. "Last week alone we produced over 100 ALE-47 components, and if needed, our output could have been higher. Our goal is to not just to deliver on time, but early," continued Garner. "We know that our troops rely on this combat-proven system, and we are going to do our part to ensure we deliver the product that keeps them out of harm's way and returning home safely."

The AN/ALE-47 CMDS is an Electronic Warfare self-protection system that provides combat aircrews with enhanced survivability against surface-to-air and air-to-air missile threats in all environments. It can easily be integrated with numerous EW systems, including Missile Warning Systems (MWS), onboard RF Jamming systems, and Radar Warning Receivers (RWR). Symetrics has delivered thousands of components to the Department of Defense, the US State Department, and numerous domestic and international commercial customers as the U.S. Government's prime supplier of the system for the last 6 years.

Symetrics Industries, LLC, an AS9100 and ISO-9001-2000 registered company, has been designing, manufacturing, testing and delivering low cost electronic assemblies and sophisticated EW and Communication systems of the highest quality to the DoD for over 45 years.
